Proposed Drawing correction

1. While the Examiner has approved the proposed drawing correction (Figures 1 and 2) filed on August 31, 2004, the drawing does not comply with 37 CFR 1.84. Drawing changes must be made by presenting replacement figures which incorporate the desired changes and which comply with 37 CFR 1.84. An explanation of the changes made must be presented either in the drawing amendments, or remarks, section of the amendment. Any replacement drawing sheet must be identified in the top margin as "Replacement Sheet" (37 CFR 1.121(d)) and include all of the figures appearing on the immediate prior version of the sheet, even though only one figure may be amended. Failure to timely submit the proposed drawing and marked-up copy will result in the abandonment of the application.

Allowable Subject Matter

2. Claims 1-15 are allowed.

3. The following is an examiner's statement of reasons for allowance: the present invention provides an image analysis process which can cyclically and interactively approximate the wishes and ideas of a user, without the user having to have detailed knowledge of the image processing itself. The key difference between the closest prior art (Jaroszewski, et al) and the instant invention is the fact that Jaroszewski does not rely upon normalizing the transformation result values which provides a normalized transformation space, and dividing the normalized transformation space into classes *with the aid of separation rules that are derived from normalized transformation result values* (emphasis added) in the image regions selected by the user. Specifically, upon acquisition of an image having individual image points, the instant

invention selects image regions of interest in the image via a user, and generates transformation result values defining a transformation space by performing preprogrammed transformations on the image at one of all individual image points and a selection of individual image points, and then normalizes the transformation result values to provide a normalized transformation space. Thereafter, the instant invention classifies the normalized transformation space by dividing the normalized transformation space into classes with the aid of separation rules that are derived from normalized transformation result values in the image regions selected by a user. These features in combination with all of the other elements are not disclosed or fairly suggested by any of the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
